

Project: Caprock Pipe & Supply, L.P. – IP Video Security

Completion Date: July 30, 2007

Project Manager: Kasee Powers

Overview

CPS needed to obtain insurance to protect its entire inventory on their facility. This insurance would cost CPS tens of thousands of dollars a year. CPS contacted ATS and asked if there was a more cost effective solution to protect their inventory. ATS suggested a video surveillance system.

Solution

ATS initially designed the network for CPS and knew it was well suited for IP video. ATS researched and concluded on a solution that would utilize high quality analog cameras with IP converts and high powered infrared illuminators to ensure adequate visibility at night.

System Highlights Included:

- 2 dedicated storage servers totaling 5TB of redundant storage space
- 9 cameras with PTZ and 28X optical zoom
