

**Project:** Caprock Pipe & Supply, L.P. – Server Upgrade

**Completion Date:** July 30, 2007

**Project Manager:** Kasee Powers

## Overview

CPS was currently running all its operations on a single 2003 Small Business Server. Data storage was beginning to run low, Exchange was running slower than preferred, and additional software installed was not performing effectively. As well, CPS was interested in utilizing the benefits of Microsoft Terminal Server.

## Solution

ATS installed five (5) new servers to reappropriate the current load on the single 2003 SBS. All data was migrated to new servers and the old 2003 SBS server was repurposed as a dedicated web server. All work was performed on the weekend and CPS experienced zero down time; all system were 100% operation by Monday morning.

## New Servers Included

- IBM - PDC / Print Server / File Server
- IBM - Exchange 2003 / BDC
- Custom Server - TimeForce Server
- Custom Server - Terminal Server
- Previous SBS - Web Server
