WHAT IS YOUR BACKUP PLAN?

Businesses today are being asked to do more with shrinking budgets and fewer resources. With digital data continuing to grow at an estimated 80% each year and 140,000 hard drives crashing each week in the U.S. alone, backing up this data is a critical task for any business. Traditional backup solutions can be expensive and take weeks to implement, leaving your business vulnerable to revenue and productivity loss.

Automatic online backup saves you time and money with a simple, secure, and affordable backup solution that allows you to focus on your business' future. With an expansive feature set at an affordable price, it is no wonder more than 40,000 businesses have chosen it.

AUTOMATIC ONLINE BACKUP FEATURE SET

Security and Encryption

- Blowfish: At the beginning of the backup process, all files are locally encrypted with 448-bit Blowfish encryption.
- AES: Optionally you may supply a personal key utilizing military-grade 256-bit AES encryption en lieu of 448-bit Blowfish encryption.
- SSL: These encrypted files are then sent via 128-bit SSL—the same encryption used in online banking—to a Decho-managed data center where they remain in their encrypted state.
- Data centers: All data centers employ state-of-the-art security and are SAS70 certified.
- Near Continuous Data Protection: Automatic Online Backup can automatically detect and back up new and changed files.
- Alerts: American Technology Systems monitors email alerts regarding the backup health of all our accounts on a daily basis.

Ease of Use

- Automatic or scheduled backups: Tell Automatic Online Backup when to perform your backups. Automatic is the simplest method in which backups are performed while your computer is not in use. Scheduled backups can be performed daily or weekly at a specified time of day.
- Block-level incremental backups: After the initial backup, Automatic Online Backup only backs up new or changed portions of files, which saves bandwidth and ensures future backups are lightning fast.
- Bandwidth throttling: American Technology Systems will determine how much bandwidth should be dedicated to online backups so other high-priority services can run unimpeded.
- Multiple restore options: American Technology Systems can restore data via the software client, through the web, or by DVD.

Platform and File Support

- Version (snapshot) support: Restore file versions up to 30 days in the past.
- SQL, Exchange, and network drive support: Automatic Online Backup backs up common business applications running on Windows servers.
- Windows and Mac support: Automatic Online Backup supports Windows (2000, XP, 2003, and Vista, including servers) and Mac OS X (10.4 and 10.5, desktop and server) operating systems.
- Open and locked file support: Automatic Online Backup backs up all open and locked files, including Outlook PST files.
